Summary:

Artificial Intelligence Engineer with hands-on experience in Machine Learning, Deep Learning, Computer Vision, and NLP. Specialized in developing AI-driven applications including object detection systems using YOLO, multilingual voice assistants with speech recognition, and computer vision solutions integrated with APIs such as Google Gemini. Strong background in Python, data preprocessing, model development, and building real-world AI systems. Seeking an opportunity to contribute AI expertise to impactful and production-ready projects.

Educational Background:

- **Bachelor of Artificial Intelligence Technology**
Helwan International Technological University, Cairo, Egypt Sep
2022 – Expected 2026
- **General Secondary Education Certificate** Martyr Major General Majid Ahmed Ibrahim School 2019 – 2022

Experience And Projects:

Artificial Intelligence Engineer – Projects & Practical Experience 2024 – 2026

- Designed and developed end-to-end AI solutions across Computer Vision, NLP, and Speech Recognition.
- Built and deployed AI-powered systems including hospital companion robots and multilingual voice assistants.
- Implemented object detection and image classification models using YOLO and CNN architectures.
- Developed and optimized machine learning models for regression and prediction tasks.
- Integrated AI applications with external APIs such as Google Gemini for intelligent, context-aware responses.
- Performed data preprocessing, feature engineering, and model evaluation.
- Collaborated in team-based projects following structured development workflows.
- Built an AI-powered smart city monitoring platform (Urban AI Guardian) for the DEPI graduation project, integrating five specialized YOLO models to detect waste, garbage-bin overflow, water leakage, weapons, and aggressive behavior in real time.

Key Projects

Urban AI Guardian | AI, Computer Vision & Smart City Monitoring (DEPI Graduation Project)

- Co-developed an AI-powered smart city monitoring platform for the DEPI graduation project, integrating five specialized YOLO models to detect waste, garbage-bin overflow, and weapons in real time.
- Contributed to the system architecture, model training pipeline, and alert-management logic, and helped build the Streamlit dashboard and FastAPI services for live monitoring and analytics.
- Collaborated with the team under the Digital Egypt Pioneers Initiative (DEPI) – AI & Data Science, Microsoft Machine Learning Engineer track, supervised by Eng. Sara Abdelmoaty.

Bulbul Hospital Companion Robot | AI, Computer Vision & NLP

- Developed an AI-powered hospital companion robot with voice interaction and multilingual support.
- Integrated Google Gemini API and enabled medication and food delivery via voice commands.

Multilingual Voice Assistant | NLP & Speech Recognition

- Built a bilingual voice assistant with real-time speech recognition and text-to-speech.
- Applied NLP for language detection and command understanding.

Object Detection using YOLO | Computer Vision

- Built and trained object detection and classification models using YOLO and CNNs.

City Explorer | Computer Vision

- Developed a computer vision system to detect Egyptian landmarks and provide live information.

Car Price Prediction | Machine Learning

- Developed a regression-based machine learning model for car price prediction.

Urban AI Guardian | AI, Computer Vision & Smart City Monitoring (DEPI Graduation Project)

Key Strengths & Specializations:

- Artificial Intelligence and Machine Learning application development
- Computer Vision (Object Detection, Image Classification, YOLO)
- Natural Language Processing (NLP) and Speech Recognition
- Multilingual AI systems (Arabic and English)
- Healthcare AI and intelligent assistant systems
- API integration and AI-powered solutions (Google Gemini)
- Data preprocessing, feature engineering, and model evaluation
- Strong analytical thinking and problem-solving skills

Computer & Technical Skills:

- **Artificial Intelligence & Machine Learning:**
Machine Learning, Deep Learning, Computer Vision, Natural Language Processing (NLP), Speech Recognition
- **Programming Languages:**
Python, Java, JavaScript, PROLOG
- **Computer Vision:**
Object Detection (YOLO), Image Classification, Convolutional Neural Networks (CNNs), OpenCV
- **Tools & Frameworks:**
TensorFlow, UiPath, Google Gemini API
- **Web & GUI:**
HTML, CSS, Tkinter
- **Computer Skills:**
Microsoft Word, Microsoft Excel, Microsoft PowerPoint

Soft Skills:

- Strong problem-solving and analytical thinking
- Effective communication and teamwork
- Ability to work under pressure and meet deadlines
- Attention to detail and accuracy
- Adaptability and continuous learning mindset
- Time management and task prioritization
- Responsibility and professional commitment

Language skills:

- Arabic: Native
- English: Advanced

Certifications & Training

- Computer Vision Summer Training (120 Hours) – ITIDA & NTI, Aug–Sep 2025
- Digital Egypt Pioneers Initiative (DEPI) – Microsoft Machine Learning Engineer – Nov 29, 2025 – Jul 23, 2026
- Applied Deep Learning – Mahara-Tech & ITI, 2025
- CCNA – Cisco Networking Academy, 2024
- Python Programming (Skill Assessment) – HackerRank, December 28, 2025
- Problem Solving & Algorithms (Skill Assessment) – HackerRank, December 24, 2025
- Boost Your Productivity with AI – Google Maharat & Injaz Egypt, 2025
- Deployment of Machine Learning Models – Udemy, 2023
- Unsupervised Machine Learning – Udemy, 2023
- Digitera Training Program – iCareer, Sep 20, 2026
